

# ATM-machine

1. I have used graphics(tkinter) to make it more attractive.
2. At first you will see welcome display,while programming I added some database such as ID name ibrahim,password is 7898 and amount is 50,000 you can run program by entering this input.
3. If account name or password does not exist it will display error.
4. If account exists then it will give three options withdraw,deposit and balance inquiry.
5. Thea amount will also be updated as operations will be performed.
